PROFESSIONAL SUMMARY

Full-Stack and Backend Developer with a solid foundation in Network and Telecommunications engineering. I have 1 year of hands-on software development with 2 years of ISP technical support experience — an unusual mix that translates into writing production-conscious code, designing reliable APIs, and understanding infrastructure beyond the application layer.

Proficient in Node.js, NestJS, Express, Angular, and Vue.js — with practical exposure to Docker, Linux, and REST API design patterns. Spanish B2 (3 certifications) with strong professional written and spoken communication. Open to remote positions with Spanish companies or international remote-first teams.

TECHNICAL SKILLS

Backend	Node.js • Express.js • NestJS • Java • SpringBoot • REST API Design • JWT Auth • Swagger
Frontend	Angular • Vue.js • TypeScript • JavaScript • HTML5 • CSS3
Databases	MongoDB (Mongoose) • MySQL (TypeORM) • PostgreSQL • JPA • Hibernete
DevOps	Docker • Docker Compose • Git • GitHub • Linux • Postman
Networking	TCP/IP • Fiber Optics (FTTH) • VLAN • Network Troubleshooting • ISP Infrastructure

PROFESSIONAL EXPERIENCE

Junior Backend / Full-Stack Developer | ALTEN Morocco

2025 – Present • Morocco

- Designed and built production-ready REST APIs using **Node.js & NestJS**
- Implemented JWT authentication with access/refresh token rotation and role-based access control
- Containerized services with **Docker & Docker Compose**
- Integrated Swagger documentation and global error handling into multi-module NestJS applications
- Collaborated with network and infrastructure teams, leveraging telecom knowledge to diagnose deployment issues

Fiber ISP Technical Support Engineer | ALTEN Morocco

2023 – 2025 • Morocco

- Diagnosed and resolved FTTH connectivity failures across subscriber networks (L1–L3)
- Managed VLAN configurations, IP routing, and fiber plant troubleshooting on live networks
- Handled high-volume incident queues, reduced average resolution time by improving escalation workflows
- Acted as technical bridge between NOC engineers and end users — strong documentation and communication habits formed here

PROJECTS

Fasossira — Transport Management SaaS

NestJS • TypeScript • Angular(Frontend) • PostgreSQL • TypeORM • JWT • Docker • Swagger

- Fullstack SaaS platform for Malian inter-city transport companies: route/bus/trip management, seat reservations, payments, and ticketing
- Multi-tenant architecture with company-scoped data isolation; white-label support per tenant
- Role-based access: Super Admin, Company Admin, Agent — with custom decorators and JWT guards
- Modular NestJS monorepo covering 12+ domain modules: agencies, buses, trips, schedules, reservations, payments, dashboard
- 2 Angular webs for both admin tasks (Super Admin, Company Admin, Agent) and public portal (for ticket booking purpose) built with state management using ngRx.

Inventory API — Production-Ready REST Backend

NestJS • TypeScript • MySQL • TypeORM • Docker • Swagger

- NestJS REST API with JWT access + refresh token rotation, reuse detection, and multi-session logout
- Products & categories with soft-delete, pagination, and full Swagger UI

- Dockerised with Docker Compose (API + MySQL); unit, integration, and E2E test suites (Jest + Supertest)
- Rate limiting (Throttler), global validation pipeline, and consistent error response shape

Eco REST API — Express Boilerplate with Security Hardening

Node.js • Express • MongoDB • Mongoose • JWT • Swagger

- Feature-complete Express API with JWT auth, refresh tokens, RBAC, and Swagger docs
- Applied security middleware: Helmet, rate limiting, CORS policy, mongo-sanitize, compression
- Winston structured logging, centralised error handling, and input validation (express-validator)
- Test suite with Jest + Supertest using MongoDB in-memory server for isolated integration tests

TailTrack — Real-Time Log Streaming Dashboard

Node.js • Express • Socket.io • JWT • Vue.js (Frontend)

- Real-time log file tailing and streaming over WebSocket — each client filters logs by timestamp server-side
- Per-client filter state with 5-second buffered fan-out; global 500-line circular buffer prevents memory leaks
- Auth with JWT + cookie-session, rate-limited auth endpoints, and security hardening (Helmet, CORS origin lock)
- Includes unit and integration test suites; Dockerised backend
- Dashboard with charts, a searchable table, and a time-based filter — updated in real time.

EDUCATION & CERTIFICATIONS

Bac+5 — Computer and Network Engineering *2017 – 2022*
National School of Applied Sciences (ENSA) — Tetouan, Morocco

Español — B2 (3 official certifications) *Certified*

LANGUAGES

French	Spanish	English
Native	B2 • 3 Certifications	B1 — Professional
